## 1. Abstract

---

### 1.1 Altibase Migration Center

---

Migration Center is a database migration tool that either directly or indirectly copies generally compatible database objects and data. Generally, manual database migration is complicated, time-consuming, and error-prone. Migration Center helps users migrate databases with only a few mouse clicks in Graphic User Interface (GUI) mode, and offers Command Line Interface (CLI) mode as well.

### 1.2 System Requirements

---

#### Minimum Hardware

The minimum specifications of hardware for running Migration Center are as follows.

|                    | GUI mode                     | CLI mode |
|--------------------|------------------------------|----------|
| Computer processor | 800MHz Pentium III or better | Ditto    |
| Computer memory    | 512 MB or more               | Ditto    |
| Computer disk      | 150MB or more free space     | Ditto    |
| Screen resolution  | 1024 * 800 pixels or higher  | -        |

# Supported Operating Systems

Migration Center can be run regardless of OS if it meets the minimum software specifications.

## Minimum Software

Migration Center is a pure Java application that uses Swing for GUI mode. It runs regardless of the user’s hardware and operating system, but relies on the JRE. The user is recommended to install Oracle, or IBM Java 8 or later. To run Migration Center in GUI mode, the user’s environment must support Java Swing.

| Mode | JRE                         | OS Graphic Library |
|------|-----------------------------|--------------------|
| GUI  | Sun or IBM Java 8 or higher | Required           |
| CLI  | Sun or IBM Java 8 or higher | Not required       |

## 1.3 Compatible DBMS

This section introduces the DBMSs and versions that can be migrated using Migration Center 7.21.

| Source DBMS                                                                                                                                                                                                                                                                             | Target DBMS                                                        |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| Altibase 4.3.9 or higher<br>Altibase Windows 2026 (Altibase 2.6.0)<br>CUBRID 8.4 ~ 11.4 (ISO-8859-1, UTF-8 charset)<br>Microsoft SQL Server 2005 ~ 2012<br>Oracle Database 10gR2 ~ 21c<br>Oracle MySQL 5.0 ~ 5.7<br>Oracle TimesTen 11.2<br>Tibero 4 SP1 ~ 7.2.2<br>PostgreSQL 9.5 ~ 18 | Altibase 6.5.1 or higher<br>Altibase Windows 2026 (Altibase 2.6.0) |

# 2. Release Information

This section summarizes new features, fixed bugs, and changes in Migration Center 7.21.

## 2.1 New Features

### BUG-52338 Changed Required Size to Estimated Size in 5. Destination Tablespaces of ReconcileReport.html

In **5. Destination Tablespaces** of `ReconcileReport.html`, `Required Size` has been changed to `Estimated Size`. The estimated tablespace size is calculated based on Altibase data type sizing formulas.

`Estimated Size` is provided as a reference for estimating the required tablespace size before migration and may differ from the actual storage usage. LOB data is not included in the calculation, and partitioned tables and indexes are assumed to reside in the same tablespace. Actual storage usage may vary depending on data distribution, indexes, partitioning, and database configuration.

During migration, additional disk space for DBMS transaction logs must be reserved separately from the estimated data size.

## BUG-52431 Added Available Size to 5. Destination Tablespaces of ReconcileReport.html

`Available Size` has been added to **5. Destination Tablespaces** of `ReconcileReport.html`. `Available Size` reflects the estimated data size calculated based on the schema information and record count determined during the Reconcile phase, allowing the available capacity of the destination tablespace to be estimated more accurately.

- **Available Size** (tablespace available capacity)
  - `Available Size` = `Max Size` - `Used Size`
  - **Max Size**: The maximum size available for the tablespace (MB)
  - **Used Size**: The size of actual data stored in the pages currently used by the tablespace (MB)

## 2.2 Bug-Fixes

---

### BUG-52457 Discontinued Support for the No Logging Option in Migration Center

Support for the **No Logging** option has been discontinued in Migration Center following the discontinuation of the corresponding interface in the Altibase server and iLoader. Accordingly, the default value of the No Logging option in Migration Center has been changed to `No`.

### BUG-52468 Prevented NO LOGGING OFF from Being Executed When an Inconsistent Table State Occurs During No Logging Mode

Fixed an issue where the `NO LOGGING OFF` statement was executed when an inconsistent table state occurred while performing a migration in **No Logging** mode.

## 3. Open Source Libraries / Royalty-Free Images Used

---

### Open Source Library

Migration Center is based on the following open-source libraries. The licenses are distributed in a text file format along with Migration Center.

| Library                                    | Open Source License                                |
|--------------------------------------------|----------------------------------------------------|
| <a href="#">Apache Commons Codec</a>       | <a href="#">Apache License 2.0</a>                 |

## 4. Packages

The Migration Center installation package is provided in two types (.zip, .gz) files.

- MigrationCenter7.21.zip
- MigrationCenter7.21.tar.gz
